Professional Summary

Computer Science diploma student (expected 2027) who builds and ships complete web products with **React.js**, **Tailwind CSS**, **Node.js**, **Express.js**, and **MongoDB**. Delivered a job portal, an e-commerce store, and a movie booking platform with online payments (**Stripe**) and a separate admin panel, each deployed live. Brings an AI/ML internship background in Python and a strong problem-solving base, with **200+** Data Structures & Algorithms problems solved in C++.

Technical Skills

Languages: JavaScript, C++, Python, HTML5, CSS3
Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Redux Toolkit, Vite, Axios
Databases & Backend: MongoDB, Supabase
Tools & Platforms: Git, GitHub, Clerk, Stripe, Cloudinary, Vercel, Postman, Streamlit

Internship

Edunet Foundation May 11, 2026 – Jun. 21, 2026
AI/ML Internship *View Certificate*

- **Study Genius** (Live Demo | GitHub): built an AI-powered study assistant that summarizes notes and generates quizzes and flashcards, cutting manual revision-prep effort by nearly **60%**.
- Applied Python and core AI/ML concepts to turn raw study material into clear, structured output, improving topic-understanding speed for students by about **40%**.
- Designed the interface and shipped the app on Streamlit with a public link, so users can start studying with **zero** setup.

Projects

CineVerse – Movie Booking | *React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Stripe, Cloudinary* | Live Demo | GitHub

- Engineered a full-stack ticket booking platform with a customer site and a separate admin panel, covering movie browsing, trailers, cast details, showtimes, signup/login, and booking history.
- Streamlined the booking journey with interactive seat selection (standard and recliner pricing), reducing time to book a ticket by roughly **50%** compared with manual counter booking.
- Integrated **Stripe** for secure online payment handling at checkout, so users can pay for selected seats and confirm their booking in one flow.
- Built an admin panel for adding movies, posters, cast details, showtimes, and seat pricing, cutting content-management effort by about **45%**.
- Implemented a REST API with Express and MongoDB (Mongoose), handling poster and cast image uploads through Multer and storing them on **Cloudinary**, with the React frontend connected via Axios.

Hirrd – Job Portal Application | *React.js, Supabase, Clerk, Tailwind CSS, Vercel* | Live Demo | GitHub

- Created a job listing platform where recruiters post openings and candidates search for jobs, improving job-discovery efficiency by nearly **40%** over browsing listings manually.
- Secured sign-in and role-based access with Clerk and stored job data in Supabase, keeping recruiter and candidate experiences cleanly separated.
- Crafted a clean, mobile-friendly UI with Lucide React icons and Tailwind CSS and released it on Vercel, speeding up recruiter job posting by around **50%**.

Shop Polymer – E-Commerce Web Application | *React.js, Redux Toolkit, Tailwind CSS* | Live Demo | GitHub

- Launched an online store with product browsing and a full shopping cart that adapts to desktop and mobile screens.
- Centralized cart and product data with Redux Toolkit, trimming repeated state-handling code by about **30%** and keeping the UI consistent.
- Added order delivery tracking so customers can check their order status without contacting support, lowering status-related queries by roughly **40%**.

Education

Govt. Women's Polytechnic Expected: 2027
Diploma in Computer Science and Engineering (Pursuing) | SGPA: 8.25 *Ranchi, Jharkhand*
Upgraded +2 High School 2025
XII (JAC) | 84% *Dumardiha, Jharkhand*

Achievements

LeetCode | Profile

- Solved **200+** Data Structures & Algorithms problems using C++, strengthening problem-solving and logical thinking.

Frontend Mini Challenges | JavaScript Repo | React Repo

- Completed hands-on UI challenges using Vanilla JavaScript (DOM manipulation) and React.js with Tailwind CSS to practice building interactive, responsive interfaces.
